```
CC The invention relates to a novel isolated antibody or its antigen binding CC fragment that associates with either IGSF9 (immunoglobulin superfamily CC member 9) or LIV-1 polypeptide, and the fully defined polypeptides. The CC polypeptide comprises a sequence selected from ADR28009, ADR28012, ADR28012, ADR28028, ADR28029, ADR28031, and ADR28032, having CC officery and a partial for the invention further comprises: a composition CC comprising the antibody which associates with IGSF9 or LIV-1 for treating CC a neoplastic disorder or the polypeptide comprising the IGSF9 or LIV-1 for treating cancer comprising the IGSF9 or LIV-1 for treating cancer comprising the IGSF9 or LIV-1 for treating cancer in a native for treating cancer comprising the IGSF9 or LIV-1 for treating cancer comprising the IGSF9 or LIV-1 for treating cancer representation of IGSF9 or LIV-1 antigen or its fragment and a carrier; a method of coveracypression of IGSF9 or LIV-1 or its fragment and a carrier; a method of CC determining the prognosis of an individual receiving a cancer treatment; a method of IGSF9 or LIV-1 or its fragment; a method for creat comprising the composition together with instructions for use to consisting the concer; a method of treating a neoplastic disorder in a nucleotide portion of IGSF9 or LIV-1 which inhibits the expression of IGSF9 or LIV-1; a method of treating a neoplastic disorder in a nucleotide portion of IGSF9 or LIV-1 which inhibits the expression of IGSF9 or LIV-1; a method of inhibiting the expression of IGSF9 or LIV-1; a method of treating a pacted from the group consisting of: ADR28001, ADR28017, ADR28018, ADR28019, ADR28026; a vector comprising the nucleic acid; and a host cell comprising the concers in a nucleic acid; and a host cell comprising the concers in a nucleic acid; and a host cell comprising the concers in a nucleic acid; and a host cell comprising the concers in a nucleic acid; and a host cell comprising the concers in a nucleic acid; and a host cell comprising the concers in the concers in 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; gene; ss.

The present invention describes a method for assessing whether a patient is afflicted with breast cancer. The method comprises comparing the level of expression of a marker (gene/polypeptide see ACC50076 to ACC5034 and ABR47386 to ABR47632) in a patient sample and the normal level of expression of the marker in a control non-breast cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal level of expression of the marker in the facilities and the normal level is an indication that the patient is afflicted with breast cancer. The breast cancer associated sequences from the present invention have cytostatic activities and can be used in gene

The invention relates to a method of classifying a cell sample as chronic phase chronic myelogenous leukaemia (CP-CML) or blast crisis CML (BC-CML). The method is useful for classifying a sample as CP-CML or BC-CML. The present sequence represents a human chronic myclogenous leukaemia (CML) gene marker used to distinguish blast crisis CML from chronic phase
                                                                                                                  Classifying cell sample as chronic phase chronic myelogenous leukemia blast crisis chronic myelogenous leukemia by detecting difference in expression of genes corresponding to the markers such as X15415, U894:
                                                                                                                                                                                                                                                                                   14-JUN-2002; 2002US-00171581
                                                                                                                                                                                                                                                                                                                          US2003104426-A1.
                                                                                                                                                                                                                                                                                                                                                                   gene marker.

                                                                    US-10-659-004-104 (1-302) x ADN03826 (1-2744)
                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.

                                                                                                                                       The invention relates to purified proteins and genes encoding them, that are involved in T cell activation (I) and has an amino acid deletion, substitution or addition in the amino acid sequences. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of autoimmune disease (rheumatoid arthritis, asthma, multiple sclerosis and diabetes), allergic disease, infectious disease, ADDS, and acute or chronic rejection at organ transplant or bone marrow transplant. This sequence corresponds to a cDNA for a protein involved in T cell activation.
                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                   New purified protein involved in T cell activation, useful for diagnosing, preventing and/or treating acquired immunodeficiency syndrome, autoimmune (e.g. rheumatoid arthritis, and diabetes), and infectious diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                            The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a marker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Classifying a breast cancer patient according to prognosis comprises determining the similarity between the level of expression of each of five genes in a cell sample taken from patient, to control levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2004-593473/57.

                                                 Pred. No.:
                                                                                                                                                        CC angiogenesis and cell remodelling. The structure of LIV-1 implicates a C role for the protein as a zinc-influx transporter protein. LIV-1 cd distribution studies indicate primary expression in breast, prostate, CC pituitary gland and brain tissue. This protein has also been implicated in certain cancerous conditions like breast cancer, prostate cancer and CC colorectal carcinoma. The antibody used in the invention is conjugated to a cytocoxic chemical. The cytocoxic chemical is auxistatin-E. Treating CC an individual with prostate or breast cancer comprises administering the CC above antibody or double-stranded ribonucleic acid. The antibody is a monoclonal antibody, an antibody fragment, or a humanized antibody. The convention also provides double-stranded ribonucleic acids that bind to CC mRNA encoded by the LIV-1 nucleic acid. These mRNA molecules can be used as cytocoxic agent for LIV-1 expressing cells. LIV-1 has been CC as a cytocoxic agent for LIV-1 expressing cells. LIV-1 has been contained the contained contained and lobular carcinoma contained the breast, epithelial neoplasma, small cell tumous and germ cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                     The patent discloses antibodies that specifically bind to LIV-1 protein which can be used for diagnosis, prognosis, and therapy of cancer. LIV-1 is a member of the LZT (LIV-1-ZIP Zinc transporters subfamily of zinc transporter proteins. Zinc plays an essential role in cell growth and is a cofactor of over 300 enzymes, including enzymes important in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID NO 1; 66pp; English.

The present invention describes an isolated PRO nucleic acid (I). Also c described: (I) a vector comprising (I); (2) a host cell comprising the vector of (I); (3) a process for producing a PRO polypeptides; (4) an c isolated PRO polypeptide; (5) a chimeric molecule comprising the polypeptide of (4) fused to a heterologous amino acid sequence; (6) an c antibody which specifically binds to a polypeptide of (4); (7) a c composition of matter comprising a polypeptide of (4), an agonist or antagonist of the polypeptide or an antibody that binds to the comprising a container, a label on the container and a composition of matter of (7); (9) a method of treating an immune related disease in a container of (7); (9) a method of treating an immune related disease in a container and a composition of container and a composition of container and a composition of container of (7); (9) a method of treating an immune related disease in a container and a composition of container and a	Aggarwal S, Clark H, Gurney AL, Schoenfeld J, Williams PM; Wood WI, Wu TD; WPI; 2004-376182/35. P-PSDB; ADP56128. New PRO polynucleotides and polypeptides, useful in useful in diagnosing and treating an immune related disease, e.g. systemic lupus erythematosus, rheumatoid arthritis, diabetes mellitus or asthma and in stimulating an immune response.	n; PRO; immune response st asthmatic; ant trheumatic; hepat rotropic; neur cide; gene the sapiens. 04039956-A2. The present invention describes an isolated PRO nucleic acid (I). Also CC described: (I) a vector comprising (I); (2) a host cell comprising the CC vector of (I); (3) a process for producing a PRO polypeptides; (4) an CC isolated PRO polypeptide; (5) a chimeric molecule comprising the CC polypeptide of (4) fused to a heterologous amino acid sequence; (6) an CC antibody which specifically binds to a polypeptide of (4); (7) a CC composition of matter comprising a polypeptide of (4), an agonist or CC antagonist of the polypeptide or an antibody that binds to the comprising a container, a label on the container and a composition of CC comprising a container, a label on the container and a composition of CC matter of (7); (9) a method of treating an immune related disease in a sample suspected of having the presence of a PRO polypeptide CC diagnosing an immune related disease or an inflammatory immune response in a mammal; (12) a method of identifying a compound that inhibits or CC mimics the activity of or expression of a gene encoding a PRO polypeptide; and (13) a method of stimulating the immune response in a memmal. The CC antiasthmatic, antidiabetic, antiinflammatory, antipsoriatic,

Schmitt A
This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in

CC prostatic tissue. Screening for inhibitors of the sequences or detection CC substances involves a binding assay, any compounds that bind are CC selected, optionally after deconvolution of mixtures. Detection of a CC predetermined minimum level of the reporter indicates the presence of CC tumour cells. Inhibitors can be chosen from antisense oligonucleotides, CC short-interfering RNA or ribozymes; an organic molecule of molecular CC weight below 5000, preferably 300, that binds to the polypeptide; an CC aptamer against the polypeptide; a (monoclonal) antibody (Ab) against the CC polypeptide, preferably humanised or human; an anti-idiotype, non-human CC (monoclonal) antibody directed against Ab or any of the above derivatised CC with a reporter group, cell toxin, immunostimulatory molecules and/or CC radioisocope. The polymucleotides are identified in human prostatic C cancer by differential expression nanlysis, using DNA microarrays, between normal and tumorous tissues, with (over)expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that C complex this cancer patients, or subjects at risk, were incubated complex were counterstained with hemalum (blue). Malignant cells stained CC biotinylated second antibody; streptavidin-conjugated horseradish CC biotinylated second antibody; streptavidin-conjugated horseradish CC samples were counterstained with hemalum (blue). Malignant cells stained CC adenocarcinoma, membrane and cytoplasmic staining was very strong, and CC polymucleotide and polypeptide sequences used in the method of the CC invention.

Sequence 2744 BP; 786 A; 585 C; 601 G; 772 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                      determining over transcription or over expression of the sequences in CC gubstances involves a binding assay, any compounds that bind are compounds the presence of compounds the presence of the mour cells. Inhibitors can be chosen from antisense oligonuclectides, compounds the presence of compounds the polypeptide, a (monoclonal) antibody (his against the polypeptide; an anti-idiotype, non-human compounds the reporter group, cell toxin, immunostimulatory molecules and/or compounds toppe. The polynuclectides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, compounds the polypeptide are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, composite the polynuclectides are identified in human prostatic concer by differential expression analysis, using DNA microarrays, composite the polynuclectides are identified in human prostatic concer by differential expression analysis, using DNA microarrays, composite the polynuclectide in many of them. Sections of tissue, isolated from composite the polynuclectide in many of them. Sections of tissue, isolated from constatic cancer patients, or subjects at risk, were incubated from constatic cancer patients and cytoplasmic staining was very strong, and constant cells stained constantions, ambrease and cytoplasmic staining was very strong, and constantion confidency and payment and paypeptide sequences used in the method of the constantion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosis is based on

```

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate call carcinogenic potential of a compound; (g) assessing the aggressiveness or indolence of prostate cancer in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker Claim 1; Page 5169-5170; 11750pp; English.

Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78831-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 3537

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for detecting a bladder cancer-
CC associated transcript in a cell from a patient. The method comprises
CC contacting a biological sample from the patient with a polynucleotide
CC that selectively hybridises to a sequence that is 80 % identical to a
CC table of sequences (see ACC50951 to ACC51059). ACC50951 to ACC51059
CC encode the human bladder cancer-associated proteins given in ABR48146 to
ABR48242). Bladder cancer-associated sequences from the present invention
CC have cytostatic activities, and can be used in antisense gene therapy and
CC in vaccine production. The method can be used for detecting a bladder
CC cancer-associated transcript in a cell from a patient. The method is
CC useful in diagnosing or treating bladder cancer and in screening for
CC compounds that modulate bladder cancer, such as hormones or antibodies.
CC The nucleic acid molecules from the present invention may be used in
CC various screening and diagnostic methods, and for gene therapy, vaccine
CC and/or antisense/inhibition applications

```
CC virucide, antibacterial, fungicide, protozoacide, nootropic, antibacterial, fungicide, protozoacide, nootropic, antibacterial, fungicide, protozoacide, nootropic, and convulsant, anticonvulsant, osteopathic, and cativity. A polymucleotide of the invention may have a use can gene therapy. The polypeptides, nucleic acid molecules and antibodies casociated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful in the manufacture of a medicament for treating a syndrome casociated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, catality, and protozoal), anorexia, cancer, cardiovascular diseases (harkinson's disease, epilepsy, immune disorders (hypertension, atherosclarosis), neurodegenerative disorders (hypertension, haematopoletic disorders, inflammatory skin disorders, castima, and various dyslipidaemias. The nucleic acids and polypeptides con that modulate or inhibit e.g. neurogenesis, cell differentiation, cell cristue typing, preventive metiodies that bind immunospecifically to NOVX calls are further used as hybridisation probes, in chromosome mapping, citseus typing, preventive medicine, and pharmacogenomics. The nucleic acids are further used as hybridisation probes, in chromosome mapping, convertions; novica shows homology to estatin known human (convertions) notes; novica show homology to fibroblast growth factor receptor 4 (FGRA4), NOV2a shows homology to fibroblast growth factor 1000 and convertion show homology to T-lymphocyte surface antigen convertion to the convertion of antigenest factor in growth factor—21 (FGF-21); NOV7a-7c show homology to alpha-2 macroglobulin-like colypeptide variant; NOV8a-8g show homology to antileukoproteinase 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-SEP-2002;

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to identify it as a clone from the
non-normalized rat placenta pool library cDNA Library Preparation:
M.B. Soares Lab Clone distribution: clones will be available
through Research Genetics (www.resgen.com) The following repetitive
elements were found in this cDNA sequence: 565-605,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              University of Iowa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Seq primer: M13 Reverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        quality sequence
5'-PGACTAGATCGTAGATCGCGAGCGCCCTTTTTTTTTTT-3'] from 2.2 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker Li-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="Vector: pCMV-SPORT6 (Invitrogen); Site_1: Sall; Site_2: NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 153-1558 (2001). [PMD: 11544199]). Total RNAs were obtained from Dr. Akhiro Umezawa (Keio University School of Medicine, Japan). Double-stranded cDNAs were synthesized with an Oligo(dT) primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /organism="Mus musculus"

Est strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a

                                                                                                                                                                                                                                                                                                                                                                                                                                              /clone lib="CSEQRBN22"
/clone lib="CSEQRBN22"
/note="Vector: pBluescript II KS(+); Site 1: EcoRI;
/note="Vector: pBluescript II KS(+); Site 2: NotI; rhis first strand in Independent clones. cDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand strand synthesis reaction. Following this first strand reaction, double-stranded cDNA was blunted, ligated to NotI adapters, digested with EcoRI, size-selected, and cloned into the NotI and EcoRI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was used."

/note="Organ: Brain; Vector: pXX- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Sonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to msNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
